Innovation and efficiency are constantly on the minds of Tia users. Yet, implementing new solutions and changes to existing ones can be slow and cumbersome, hindering true innovative progress. That's why our summer enterprise improvements and add-ons are focused on speed and improved REST services, enabling quicker solution development and faster time to market.

Additionally, our new and enhanced business solutions, focused on increased automation, faster product distribution and workflow efficiency, provide numerous ways to pursue innovation and achieve a dramatically improved customer experience.

Tia enterprise improvements and add-ons

- Tia 7.8 has been upgraded to the latest Oracle version, Oracle 12c, which includes Oracle ADF (Application Development Framework) for simplified application development and out-of-the-box infrastructure services
- Tia REST 1.0 – A stand-alone REST solution that reduces costs and risk of REST updates and increases innovation
- Tia Reinsurance 2.0 – An integrated reinsurance solution that automates reinsurance processes and delivers a seamless user experience
- Tia L&P – An integrated Life & Pension solution that delivers a complete customer overview for all LOBs, an efficient user experience and overall cost savings

Tia Digital Solutions

- Tia Agent – An intuitive, efficient distribution channel that empowers external agents to deliver customized products to customers in real time
- Tia Widgets – Plug 'n' play standard web components that can be integrated with different web pages to create functionality and display information for end customers

Tia Business Solutions

- Tia Sales Product Designer – An easy-to-use design engine that lets sales and marketing teams create customised products and get them to market fast without the help of developers
- Tia Claims Journey Designer – Allows Business Designers to create the customers' self-service claim journey and modify it in real time without the help of developers. An excellent way to improve the customer experience
- Tia Business Rules Designer – Allows rules specialists to create and modify various rules-based workflows without the help of developers, increasing efficiency throughout the business
